

Groundwater in Germany

Groundwater level time series in Germany for the year 2015. For the exact locations of the related observation wells check out the mini-map. The backfilled area shows 90% of measured levels during the reference period (1981–2010).

The colored lines indicate levels **below** or **above** the median levels over the reference period.

Groundwater levels are normalized for easy visual comparison of dynamics rather than absolute values.
